Craig,

You are correct. Rob Harris wanted to schedule the field exam on his own. They need to do some work on the wells before the field exam can be done, so he is going to either work with a private field examiner or personally contact Eastern to perform the field exam.

Thank you for following up on this. I wasn't sure, but I felt like we would need to require a field exam.

Dan

Hey,

I just want to touch base with you on this Telford issue.

I spoke with Shelley and he said if the permit was going to be put into the water bank, then we need to get a field exam done first. However, I wasn't sure if it was requested that permit 34-2486 be put into the water bank. Perhaps it was just one of the wells permitted under 34-2486 that was included in the water bank lease application. However, if I understand correctly, it doesn't matter anyway because the water bank application will no longer include the well in question that is permitted under 34-2486. So this is a non-issue.

In addition, after speaking briefly with Dan, it sounds like Rob Harris would like to have a private examiner conduct the licensing field exam. So I will not ask Eastern to prioritize the licensing field exam for 34-2486.

In summary, my understanding, and correct me if I am wrong, is that the Water Bank has no further interest at this time in seeing the licensing field exam expedited for 34-2486. To our knowledge, the permit holders attorney is going to hire an outside field examiner anyway. Therefore, I will put this file back on the vault shelf.

Sound good?

Craig
