Eastern Region

Dear James,

Thank you for your kind attention, this has been a new experience. Please find enclosed a Google maps showing distances from our irrigation well. Our irrigation well is located immediately behind our house in front of the shop. When Scott came to measure our well water it was still a work In progress that is we thought we still had time to match our well out put which was equal to our 'permit output of 1.161 cfs'. And for the last eight years we have been working in that direction. Not knowing that in 2001 the time had expired for improvements.

We purchased the property in 2008 and we had covered all the property except the 2 acres on the east end, which was next. Under Scott's council we applied for a new permit to water the two acres not covered by our 'new water' right of .96 cfs. We understood if we did not impact our neighbors wells we could be restored to 1.00 cfs .

It is our intent to show through past usage that we did not impact our neighbors wells and that because of the distance (see enclosed maps from the Oneida county recorder's office) the nearest wells and also, to show how much water we were putting to beneficial use since the well was put in place in about 1997.

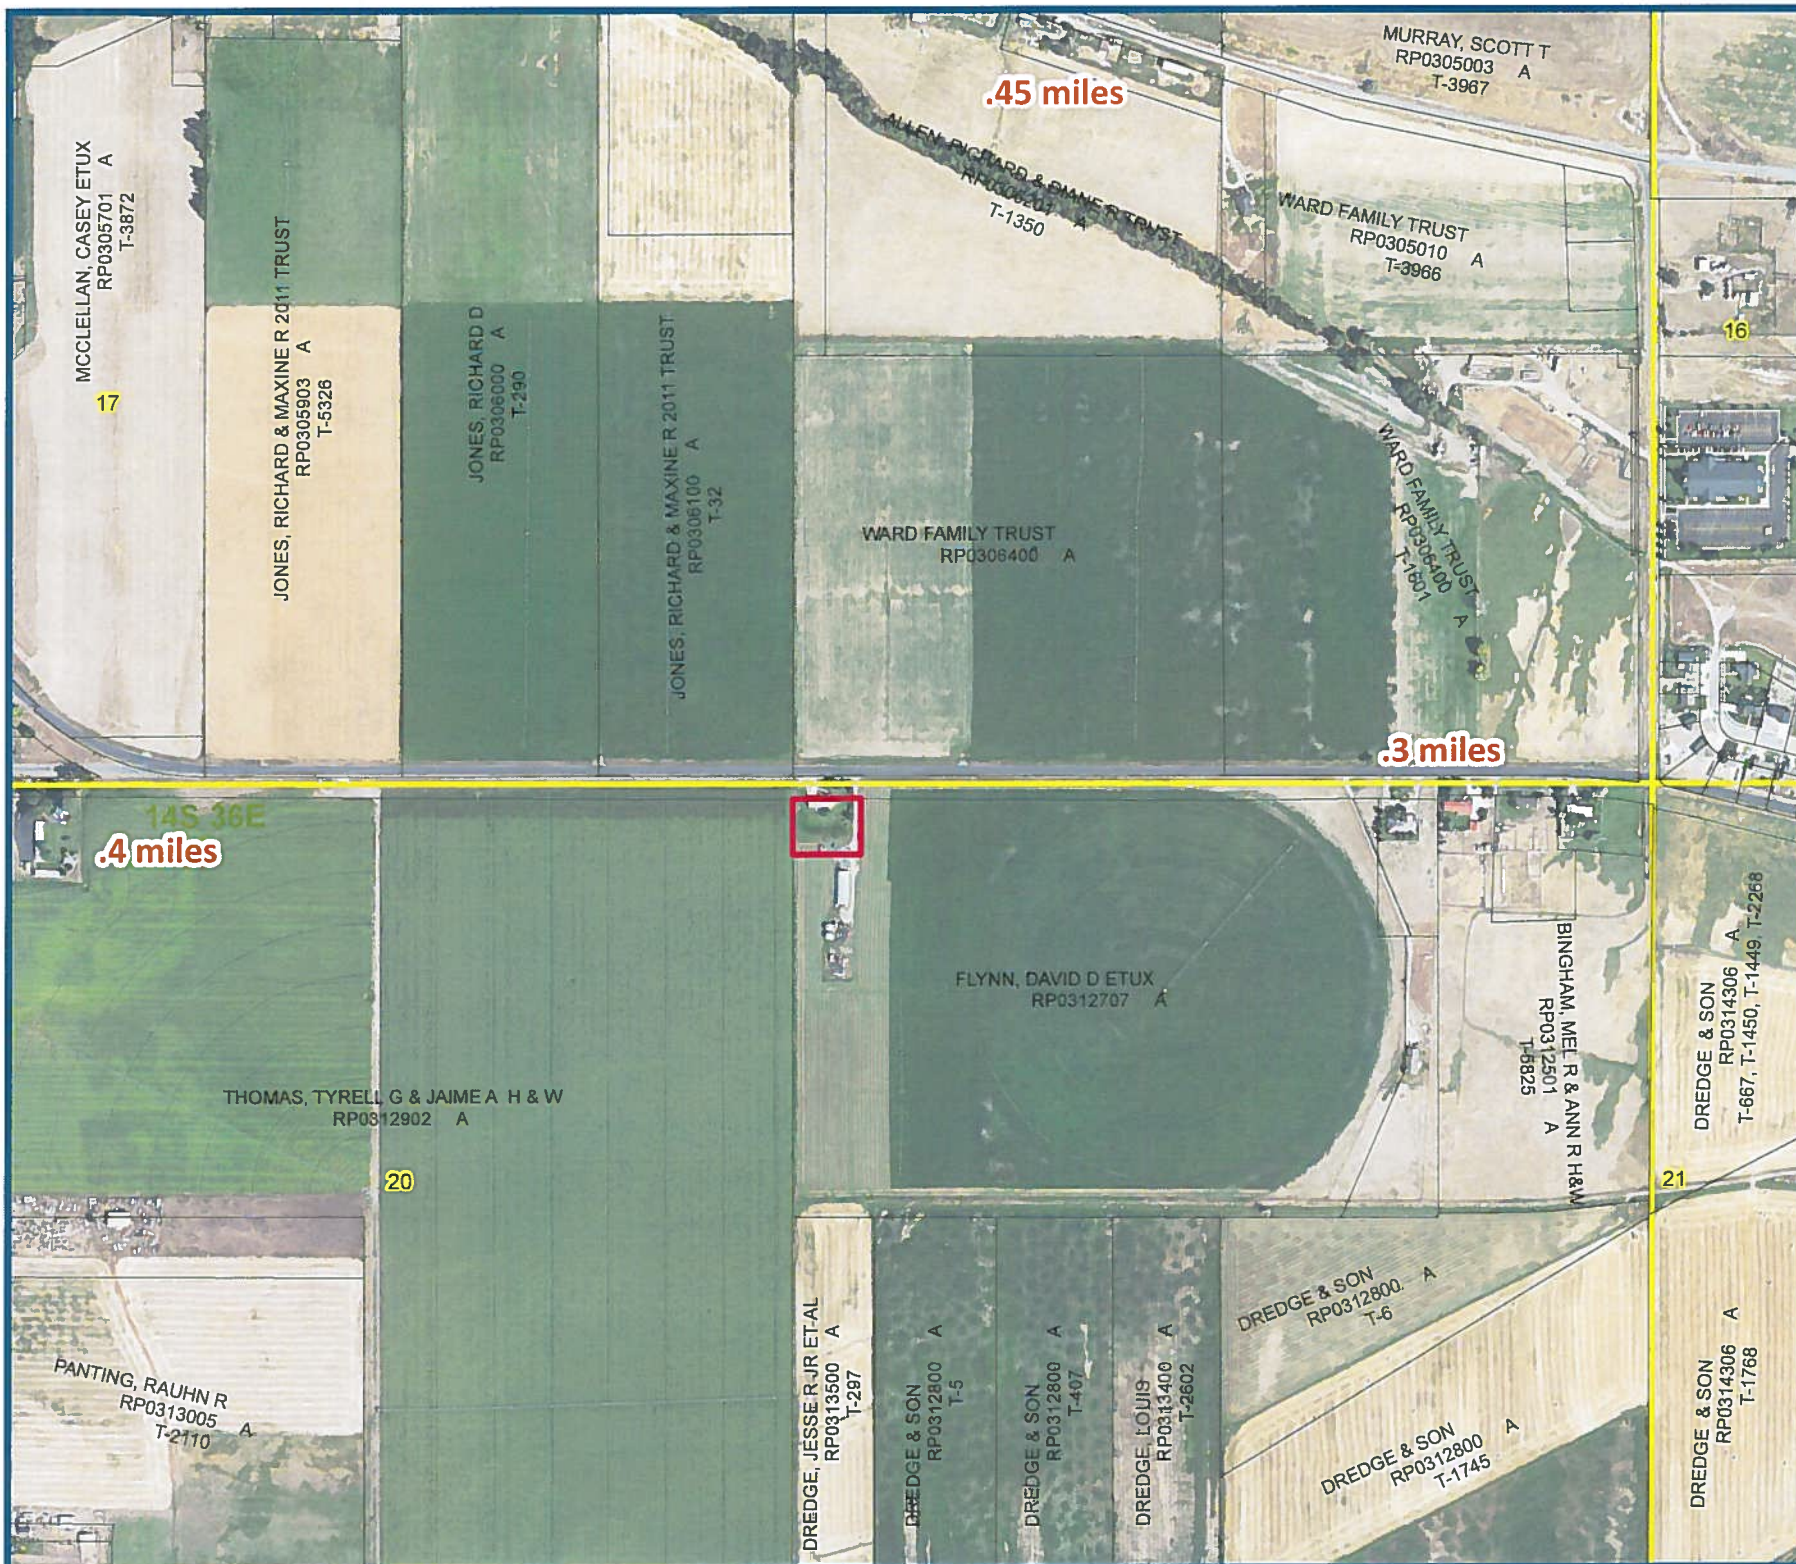

Scott counseled us that a hydrological report might be necessary to restore water for the 2 acres. We called Rocky Mt. Environmental and I said I would send all of the information I had, but Bryce said it wasn't necessary as he had it all in front of him – just send a check for \$500 and the balance of their flat rate of \$1500 later. Then I asked him, "What constituted a favorable report?" He said, "The report was standard and would be favorable, but he couldn't speak for the Idaho Department of water resources". I said, I was still trying to work things out and that I would have to get back with him.

My phone call to James was most helpful in meeting the guide lines for a new permit as the money that would have been given to Rocky Mountain can now be used to extend our mainline and finish the project and meet the requirements of the additional water to bring us back to 1.00 cfs.

P.S. We greatly value Scott's council and would like to continue to work under his direction.

Thanks again,

Dave Flynn
