

MEMORANDUM

Date: March 10, 2015
To: Water Right File 33-7183
From: James Cefalo
Re: License Adjustment

Permit 33-7183 authorized the irrigation of 320 acres. IDWR completed a beneficial use field exam in 1996. The field examiner found 311 irrigated acres. James Mays of Mays Land & Livestock was contacted about the permit and stated that the ground water well described in 33-7183 was tied together with the entire farm irrigation system since the time the well was constructed. Mr. Mays acquired the property in 1993. Therefore, the well described in Permit 33-7183 could have been used to irrigate any of the acres on the larger farm.

Aerial photos indicate that Mays Land & Livestock regularly irrigated more than its existing SRBA decreed rights allowed, meaning the additional 9 acres were actually developed. License will be issued for the full 320 acres. Water right 33-7183 will be tied together with all other water rights on the property. Place of use will be described as a permissible place of use with all rights limited to 1,473 acres.

James Mays confirmed that the home associated with the domestic portion of Permit 33-7183 has been removed and will not be replaced. Domestic use can be dropped from water right license.
