95-9247

Logistically the property for this water right is located within the Rathdrum Prairie Ground Water Management Area. The well for this right is constructed within the middle channel of the Rathdrum Prairie Aquifer between Round Mountain and Chilco Ridge. The well was constructed through approximately 240 feet of sands/gravels and continuing through 420 feet of granite to a final depth of 660 feet. The estimated water elevation of the aquifer in this area is below the sands/gravels encountered. Therefore, it is believed this water right is not connected to the Rathdrum Prairie Aquifer.
