Subject: Water right 37-22841 / T#78777 - T. Creighton

Dear Allen:

This is to provide an update on water right 37-22841 as modified by T#78777 relative to the accomplishment of the authorized changes and compliance with those transfer conditions which require specific action by the water right holder:

Condition #2 requires a lockable device on the diverting works. The pump intake and pump has been installed, which includes a valve both on the intake line and on the pump discharge that can be regulated and locked by the watermaster.

Condition #5 requires a measuring device on the pond inflow and outflow. By letter dated September 15, 2014, the Department waived the requirement to measure the inflow. On the outlet of the pond, a check and weir structure has been installed. The weir is an adjustable rectangular sharp-crested weir and the watermaster has indicated his approval. A gauge on the weir serves to measure the head on the weir and the pond level.

Condition #10 requires that the changes authorized by the transfer be accomplished within one year of the date of approval, which would be March 20, 2015. It is believed that all actions required by the transfer have been completed prior to this date. If the Department believes otherwise, please consider this letter as a request for a one-year extension on the deadline imposed by Condition #10.

Cordially,

Chuck
