Subject: Permit 95-11063

Dear Mr. and Ms. Cunningham;

Our office received your proof of completion for water right 95-11063. Generally, the Idaho Department of Water Resources (Department) requires a water right agent to meet with you to verify the use and attain the information needed to issue the license for this permit. However, aerial photography shows the home associated with the domestic use, so all we really need to complete the verification of this permit is to determine the size of the pump being used, and if a fish screen was installed on this system.

You should be able to attain this information from the company that installed your pump in the lake. We will need confirmation from them that a ¼ inch fish screen was installed on the pump intake, and size of horsepower (Hp) of the pump that has been installed. This information should be on the invoice you received from the company, so you may have the needed information in your records. There are also many folks who will pull the pump from the lake over the winter to avoid damaging the pump. If this is the case, you could take photos of the intake screen and the pump nameplate. The pump name plate should list the Hp of the well.

If you can get me the Hp of the pump and verification that a ¼ inch screen was installed on the pump, we should be able to license this permit within a couple of weeks from the time we receive the needed information. I would appreciate it if you send us this information by January 12, 2015. If you do not want to supply the information, you can request that Department personnel set up an appoint with you to come out and verify the water use. This would require you to be on sight, and could require you to pull the pump out of the lake to allow Department staff to verify the screen and pump Hp.

Thank you so much for your time and patience. I really appreciate the help.
