

MEMORANDUM

Date: September 12, 2014
To: Water Right File 71-10921
From: Michele Edl
Re: conference call and follow-up

Today, Dan Nelson and I conferred with Erik Powell (Brockway Engineering) about the measuring device requirements of this permit. Mr. Powell has conducted a field examination of the project and has submitted a report of his findings to IDWR.

At this time, the permit holder is not in compliance with the conditions of the permit. Mr. Powell requested clarification of how a watermaster would use the additional meter to control the diversion. We explained how measuring both the entering and exiting flows would ensure that the ponds would not be storing water for irrigation. The permit authorizes aesthetic and recreation storage but not irrigation storage.

The permit holder intends to comply with the condition and has until the proof due date, February 1, 2015 to complete necessary modification to the system. However, Mr. Powell stated that they will likely make the changes before the end of October.
