DEPARTMENT OF
WATER RESOURCES

Subject: **Amended** Beneficial Use Field Exam Report – City of Nampa
Permit No. 63-10211

Dear Ashley,

Thank you for providing additional information found in IDWR's records pertaining to pump capacities in 1989. This information is critical in determining the extent of beneficial use at the time Permit No. 63-10211 was developed, and the City of Nampa no longer had a record of the information submitted. We understand the City's information was originally submitted to IDWR by attorney John Marshall in 2004. The information is dated July 1989. On behalf of the City of Nampa, SPF is pleased to submit an amended beneficial use field exam report based partially on this information.

The City's application described eight wells delivering water to the City's non-potable water distribution system at the time of filing. Pump capacity information for each described well is found on the 1990 City spreadsheet.

At the time we prepared the original beneficial use field report, we understood that the well referred to as "Meadowbrook II" was developed prior to 1989. We lacked information about the eighth permitted well (West Park) at that time, and sought to authorize diversions from Meadowbrook II by adding a point of diversion to the permit and subsequent license. The 1990 City spreadsheet includes information about the West Park well. We have amended the beneficial use field exam report to remove Meadowbrook II and add West Park. The City of Nampa will file an *Application for Permit* to develop a water right for the Meadowbrook II well.

Please contact me with any questions.

Sincerely,

A handwritten signature in blue ink that reads "Roxanne Brown".

Roxanne Brown
