Good morning Rachel,

I was contacted by William Phelps on East Pine Creek concerning his water permit. He petitioned me about waiving the lockable controlling works and measurement device requirement for his domestic water permit (67-15107). I met with him, looked at the system and see no reason to require the lockable controlling works and measurement device at this time. He has a small pump which he uses to fill a 250 gallon water tank via an 1 1/2" pvc line once or twice a year when he spends a couple of weeks at his cabin in Pine Creek Mountain Estates. I've attached the pictures I took to this email. If you have questions for me, just let me know.

Have a Great Day!
