August 20, 2014

Dear Director of Water Resource Department,

We are writing in regards to the water rights and permit 15-7377 that Eric Hartvigsen, P.O. Box 53 Malad, Idaho 83252 is applying for.

We are concerned about the affect that this Irrigation well that he is applying for will have on us and our neighbors, we live just south of where this property is and it would affect so many of us. Please there has got to be a stop to all these irrigation wells in this valley when the water supply in this valley is declining every year and with the drought that this valley is suffering from. When there have been so many large irrigation wells go in then their surrounding neighbors have been deeply affected by them, some have had to drill deeper or have them blowed out. It is not fair to these residence and especially when some of them our elderly and also "we" don't have the funds to do this. Please consider the affect that it will have on so many of us in this valley. There has got to be a change in the system here. It is just a revolving cycle, One large well goes in and several residential wells have to go deeper, and these wells aren't cheap. So please consider the affect it will have on so many residence here. Maybe they should have to be reasonable if other wells are affected by this.

Thank You,

David & Diane Daniels
