Subject: Application for Extension of Time to Avoid Forfeiture of a Water Right

Dear Doug,

Enclosed on behalf of Redstone Partners LP (Redstone) is an application to avoid forfeiture of a portion of water right 37-483B. A portion of the water right has been placed in the IWSB with water rights that are associated in a permissible place of use. Redstone is seeking to protect the balance of the water right during its negotiations with the 45 Canal to have the right delivered (when in priority).

The water right is currently described within a permissible place of use (PPU). We are providing a copy of the spreadsheet used to calculate the diversion rate and acreage offered for lease under each water right. The portion of water right 37-483B to be protected from forfeiture by this application is noted in the "IRRIGATED" column, and totals 62.32 cfs and 988.9 acres.

Redstone Partners provided a single check for the forfeiture application fee, and fees associated with IWSB applications which were submitted separately to the IDWR State Office. The fees were submitted to the State Office on April 29, 2014.

SPF can provide GIS shapefiles via email for the proposed lands on request. Please contact me if you have any questions.

Sincerely,

Roxanne Brown
Sr. Water Rights Specialist

Cc: Steve Beevers, Redstone Partners
