Notice of Protest 79357, 79380, 79384

7/15 /2014

6. The new super well to be drilled with be .1 of a mile from my well and will pump 124.8 af. The aquifer the waters rights originate are approximately 37 miles south from where the proposed well will be dug. I believe this is not even the same aquifer that our wells get water from and thought water cannot be transferred from one aquifer to another aquifer. The potential injury due to the volume of pumping from the proposed well, that will be impacted on domestic well at 3290 n 2200 e, twin falls, and myself, and my animals is massive .Other impacts are financial if our well collapses due to water changes, we have to dig deeper to get the same water volume and shortages, as well in later years we can't sell our house because we have no water- big financial hardship.

7. The applicant would have to guarantee that our well keeps the same static pumping level that we have today, and if there are any costs incurred because that pumping level declines at any time they will pay all cost to rectify our situation for 20 years.
