re: Transfer No. 78950

Please find enclosed the \$25 fee for protesteing the above change of Point of Diversion. If allowed this change can injure local public interests by reducing the availability of range ground for wildlife and big game. It will have a negative effect on the local agriculture base, by reducing stream flow throughout the affected "Advent Gulch" drainage. There are agriculture interests that have have historically used this flow, including the property identified in the public notice for change of water right.

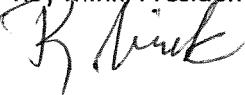

Thank You
