Water Flow Assessment

of Tatar's Well

by

Maverick Well Drilling

The well was drilled in Fall 2009. The water production of the well was stable, collecting water from the underground and freely flowing water resources. As stated in the Maverick Well Drilling report, water flow was stable at $2\frac{1}{2}$ - $3\frac{1}{2}$ **gallons per minute** during the dry season. The owner of the well was measuring 6 gallons per minute during the Spring.

Several years of diversion of the seasonally flowing water from two springs in the BLM land apparently caused the well's water table to drop. The assessment of the Well's water flow today is from 3 to 5 **gallons per hour**.

If the natural flow of spring surface water is restored, we expect the water production by the well to recover.

Application For Permit No. 29-14117

Dear Applicant(s):

The Department of Water Resources has received your water right application. Please refer to the number referenced above in all future correspondence regarding this application.

A legal notice of the application has been prepared and is scheduled for publication in the IDAHO STATE JOURNAL on July 17 and 24, 2014. Protests to this application may be submitted for a period ending ten (10) days after the second publication.

If the application is protested, you will be sent a copy of each protest. All protests must be resolved before the application can be considered for approval. If the protest(s) cannot be resolved voluntarily, the Department will conduct a conference and/or hearing on the matter.

If the application is not protested, the Department will process your application and notify you of any action taken on the application. If your application is approved, the Department will send you a copy of the permit.

Please contact this office if you have any questions regarding the application.

Sincerely,

A handwritten signature in blue ink that reads "Sharla Cox". The signature is fluid and cursive, with the first name being more prominent.
