Re: Ground Water permit application #63-33857

Dear Bob,

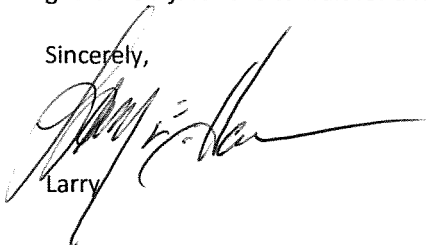

I am writing you to ask that you voluntarily withdraw your protest of my ground water permit application. As I understand there are two way of settling this dispute. The first is for you and I to agree to something that would compel you to withdraw your protest. The second is to arbitrate through IDWR.

I'm not sure of your concern as to how my water consumption may affect you. We have been here for almost 20 years and I have not been made aware of any affect to your water supply. If so I would like to know. During that time period we have probably had as dry conditions as the area has ever experienced. Our wells are almost a ½ mile away from each other and as I understand we sit on a rather large aquifer. Also my well subs up to 43 feet and my pump is set at 85 feet. I understand your well is 150 feet deep but I don't know your pump depth. I any event in a low water year it would seem as though I would quit pumping before you unless your pump is set above 85'.

I wish I could flood irrigate my five acre parcel but due to its elevation I would have to pump and it's just not practical given the distance from our weir. I tried to pump from your ditch a couple of years ago with an agreement with your Tenant but it was just too expensive running a gas pump and electrical is too far away.

If you would like to meet in person to discuss further concerns I am open and you have my number. Otherwise I guess we'll just have to wait for a formal hearing with IDWR. I look forward to your response.

Sincerely,

Larry
