Hey Cindy,

I have possession of 37-8846. I just looked through it and the last action that was taken was on 3/7/14 where Sandy sent a Notice of Intent to Void Permit and gave them 30 days to respond....which they didn't. This basis behind the intent to void was the fact that the measuring devices weren't installed and there was no waiver granted. The next step would have been to void it and let them petition.

Her notes don't say anything about a second water source. If she found one, she didn't put it in her write up.

Give me a call when you have time and we can talk about what you think we should do with it.

Later,
Craig

Hi Pam – It appears Sandy H conducted this field exam in 2012, along with a few others at Soldier Mtn Golf and Resort near Fairfield. The other rights are licensed (or pending license) but the new watermaster of 37B tells me that Sandy had called him in Feb (just days after his election!) and asked if he would recommend a waiver of the meas device condition on the permit. He discussed it with his advisory committee and told her no.

We have been doing surface inventories in 37B and I now have some additional info on that permit and should probably talk with whomever it has been assigned to. The watermaster and I agree that the meas condition needs to be enforced. We also found a second source of water contributing to the ponds and a possible non-conforming irrigation pod under some associated rights, and I wonder if Sandy also found that.

I am on vacation next week but didn't want to forget about this. If you would just have someone send me an email and identify themselves as the holder of this file, I'll get back with them when I return.

Cheers!
Cindy
