Re: Permit File 75-14781

From: KMathews

Date: 5/13/2014

An error in data entry inadvertently resulted in application for Permit 75-14781 to be advertised with an incorrect diversion rate. Application for Permit 75-14781, proposed a diversion rate of 0.10 cfs for the irrigation of 4.7 acres and 0.01cfs for stockwater use. The advertising that appeared in the Recorder Herald on April 3, 2014 and April 10, 2014 indicated a diversion rate of 0.94 cfs.

Since the application requested a lower amount of diversion than was advertised, no re-advertising was necessary. The application for permit was approved at the requested diversion rate of 0.10 cfs for irrigation purposes.
