Mae and Bryce,

Thank you so much for the information. These items actually came in right at the right time. I am winding down my field season right now, so I am going to start working on the licensing of the field exams that I have done this summer. As I told the folks that I met with in May, I start preparing the field exams I worked on all summer starting in late September and early October. I haven't picked up your file to start the preparation on the license yet, but I hope to get started on it before the end of this year.

Thank you so much for the information you submitted. I will put it into the file and start work on it as soon as time allows.

Subject: Evergreen Terrace Water Right 92-7229

Dan,

Sorry for the delay in getting you this information.

Attached is the information you requested when we met in May to show beneficial use for our new well for water right 92-7229.

We were not able to find any information on the pump in our backup well located by the reservoir, but attached is the information sent to me by our engineers on the new pump in our main well.

I have also sent you some information I sent to the CDA IDWR office in November 2012 to get some of this water right information changed over to municipal for Evergreen Terrace Water Association prior to completing our water right process.

I was not able find all of my emails with Greg Taylor in CDA because some were lost on my work computer when I retired, but this is the main information that was exchanged.

Attachments include:

Notice of Change in Water Right Ownership
Water System Transfer Agreement
Email to Greg Taylor to clarify ownership & usage
Pump Curve and information on Main Well #3
Map/Plat of Association use area.

Let me know what other information you may need to proceed with this extended Water Right process.
I think we are getting closer.

Thanks,

Bryce Coulter
Evergreen Terrace Water Association
