

MEMORANDUM

TO: Water Right File – 65-22844

FROM: Patrick Kelly – Water Resource Agent

DATE: March 26, 2014

SUBJECT: Review of Water Right File for Licensing

There was a phone conversation today with Mr. Lambert concerning the irrigation portion of his water right. It was difficult to tell what exactly had been irrigated. In an effort to confirm that water was being used to irrigate, Mr. Lambert confirmed that ditches have been established on the place of use, he has only been away from working the land as much as he would like. Mr. Lambert described to me that the irrigation is being used from the pond then east to the road. After comparing different aerial photography, I was able to estimate the location of what appears to be irrigated land. Permit 65-22844 authorized 5 acres of land for irrigation and 4.2 acres were measured.
