

City of Boise Geothermal

3/5/14

Bruce Smith - BWSWD, Pat - BWSWD,
Norm Young - Edwards, Ken Neely - IDWR,
Harriet Hensley - State, Bob Maynard - City,
John Tensen - City, Jon Gunnerson - City,
Charlie Hansinger - Terteling, Garrick Baxter IDWR
Jeff Peppersack - IDWR

Ken - overview of aquifer monitoring.
WY13 Report. Aquifer looks stable.
Fall recovery looks good - close to 1980 levels.
tempo - very little change, favorable.
No concern - aquifer behaving as hoped.

Bob - stipulated agreement
250 mm +
add 40 mm = 290 +
chart in agreement caps @ 280 mm
2013 close to current authorization 267 mm

City update - last year 2 new bldgs
2 more commitments
use @ BSV very efficient

UAW - reduced from 23-24 to 9 mm
no specific reasons identified

City keeping up against limits.

Bob - wants to discuss possibly increasing beyond stip. agreement to 290 mg - bumping up against limits with cement commitment and aquifer is responding well.

Charlie - fundamental unfairness issue with open-ended permit and no deadline for proof.

Norm - proposed 1 week for responses to City's request.

Ganish - response to Charlie's concern unique situation being addressed by stipulation. IDWR thinks their should be decision on timeline for licensing, probably next year for licensing @ 310 mg cap in WY2017

Teff - 5 yr moratorium extension being drafted. Will plan to issue order without sending drafts around this time.

Bruce - Grand Hollow irrigation issue. City is sensitive to CU issue and trying to limit
