Re: Consolidated Irrigation Glendale Conduit Hydro FERC Docket# P14443

Section 30(a) of the FPA requires a conduit exemption to be located on a conduit used primarily for agricultural, municipal, or industrial consumption. We are obtaining the data and performing the acts required to support an applicant for a license involving a conduit exemption. The first phase consultation requires that we notify the stakeholders and hold a public meeting. We have schedule a public meeting on October 25, 2012 from 3:00 to 5:00 p.m. The meeting will be held at the Franklin County Extension building located at 561 West Oneida Preston ID 83236. After the meeting representatives will be available to provide a site visit to those that wish to see the site.

The primary purpose of the conduit is to replace an existing earthen ditch and convey irrigation water that has been appropriated based on Idaho State Law for the consumption use of irrigation. The reason for this conversion is to reduce water loss from seepage. The pipeline discharges into a company owned irrigation reservoir. The pipeline construction provides the opportunity to add a hydro facility.

Please see the attached information regarding the hydro facility.  
Sincerely

Lyle Porter  
President
