Subject: Acres irrigated from 2-10416 diversion

Ron,

I'm trying to determine the number of acres that can be irrigated from the Snake River pump north of Homedale. This will be the Acre Limit of the right within the service area of Gem Irrigation District. I have attached a pdf showing the service area in dark blue, the irrigated lands in light blue, that look to be downstream from the pump discharge and other irrigated lands served by the district in black. The pump location is in red. The irrigated lands we have from the district back in 2005 as a part of the SRBA acreage determination for the district. Are there lands that could be delivered to from the pump and canal system and I'm not showing on this map? If so let me know and we can talk about delineating them to include in the Acre Limit.

Michael
