No major issues. Can't remember who down there would be shut off at some point on the creek and not understand that its not creek water but canal water and that the creek is dry up above them. Nothing we can't handle.

Ryan,

Thanks for the quick response. Hope all find well with you and family this time of year and hope you've enjoyed the holidays.

What issues are you anticipating? If we can condition the rights to prevent problems, this is our opportunity to do so.

Thanks again.

-Jeff C.

No objections. Might cause an issue or two but should be minor. Hope the holidays treated u well.

Ryan,

Attached is a PDF of the (amended) application for transfer 78293. This application has been in our protest drawer since, I believe, 1992. It was originally filed by Mulberry, but was later assigned to Meyers. It involves the injection of an unnamed stream into Rock Creek and rediverted downstream. There is another adjacent Rock Creek right (47-2502), which they decided would be best to put in a permissible place of use. The protest was withdrawn with a stipulation that a flow meter be placed at the point of rediversion. Those conditions

will be on the approved rights. You can see the attached (DRAFT) sufficiency memo for a better explanation. Please let me know if you have objections to this proposed change.

Would also like to note that when I drafted the amended application, I had an opportunity to discuss with Craig Giles the measurement of injected TFCC water into Rock Creek. Sounds like he is on board to measure where it goes in and comes out.

Please let me know if you have any questions. Thank you.

-Jeff C.
