

MEMORANDUM

TO: Water Rights File 74-15624
FROM: Sandra Thiel
DATE: November 27, 2013
SUBJECT: Required Measuring Device

Al Simpson applied for a waste water permit in March 2005. The permit issued in September 2008 allowed for the diversion of 0.24 cfs and the irrigation of 24 acres. The Department included the condition: *Prior to the diversion and use of water under this right, the right holder shall install and maintain acceptable measuring device(s), including data logger(s), at the authorized point(s) of diversion, in accordance with Department specifications.*

After the field exam, I recommended 5 acres and 0.1 cfs for the license. According to the attached memo on measuring devices this would not exceed 0.24 cfs and could be considered de minimis. That would allow the condition: *Upon specific notification by the Department, the right holder shall install and maintain acceptable measuring device(s), including data logger(s), at the authorized point(s) of diversion, in accordance with Department specifications.*

The water master for water district 74-C, Bohannon Creek, responded to a request for comments from the permit holder. Jerry Elzinga stated in an email dated November 15, 2013 (see attachment) that the ditch that provides waste water for this right does have a lockable headgate and a measuring device.
