

MEMORANDUM

TO: File 75-14549

FROM: Daniel Nelson – Staff Hydrologist

DATE: December 9, 2013

SUBJECT: Licensing Review of Water Right 75-14549

The conditions were a little difficult to determine, since this system is a portable system with a portable pump and sprinkler system.

We have determined to replace condition 195 with condition R02. This will require the fish and game to maintain a portable pump that can be shut off and locked if needed by the watermaster.

Condition 029 was tweaked to say The right holder shall comply with all fish screening and/or fish passage requirements of the Idaho Department of Fish and Game. We have no actual proof that Fish and Game has the proper screening on their portable pump, but we are assuming that they would comply with their own requirements. We left this condition on the water right to ensure that future owner's of the property comply with the fish screen requirements.

We changed condition R67 to condition X31, since there is not more than 1 acre being irrigated. The Fish and Game stated that they are irrigating 1.3 acres, but the field examiner determined that only 0.7 acre could have been irrigated using the Fish and Game's information. Since there is less than 1 acre being irrigated, we always change the condition to X31 to limit the diversion rate and volume to the amount licensed.
