Ok, I will leave the dot where I moved it to based on the GPS coordinates. You're right, it's better than in the middle of the river! Thank you for the information so we could make our data a bit better! Have a good day!

Angie

Yes, it is in the middle of the field. Remember, I originally planned to put the house up on that plateau looking out on that wide expanse of the Snake River; then Jack Simplot convinced me that a better location was down lower right within a few feet of the Snake River, despite the flood exposure (he said--"What is the money we made for, if not to pay for flood damage?"). Joe

I would say a better location is a little further north, perhaps half the way to the 3-bay garage from where you are showing it on the map. If that is too vague, then use what you have. It is better than locating it in the middle of the Snake River! Thanks again for all the great help. Joe

Hi Joe!

I was updating the shape for your domestic and stockwater right for the stone house. Attached is the location for the GPS coordinates you sent me for the house and the well. Does the well location look correct to you? Is it in the middle of that field? Let me know if this seems right to you when you have a minute.

Thanks,
Angie

Hi Joe!

Thank you for the GPS information. I will work on moving your point of diversion to the GPS location. I'll send you a map with the update location as soon as I get it moved. More to come...

The Garmin reading for the well (in the pasture next to 3-Bay garage) is N 43 degrees 04.997', W 116 degrees 11.663'; it provides water to stock water tank next to 3-Bay garage and stone house where we had lunch, which has Garmin reading N 43 degrees 05.097', W 116 degrees 11.735' elevation 2346'.
