Subject: Gardner Mace Ranch LC applications for Permit and Transfer

Enclosed on behalf of Gardner Mace Ranch LC please find applications for Permit and Transfer associated with a property located near Eagle, Idaho. The permit application proposes development of aesthetic and recreation storage in a system of eleven ponds. The ponds will intercept shallow ground water with depths ranging approximately from 10 to 42 feet. Total anticipated pond surface area is 22.5 acres.

The Transfer application changes two water rights appurtenant to the property. A 22-acre portion of water right 63-216A is changed from irrigation to aesthetic and recreation storage. Because it is presumed that ground water in these shallow ponds is tributary to the Boise River above Star Bridge and that evaporation from the ponds could potentially reduce flows in the Boise River, this nature of use change provides the mitigation necessary to offset evaporative losses from pond surfaces required for approval of the permit application described above. The water balance provided in Transfer Attachment 8a is based on historic consumptive use of a field corn crop. I personally witnessed field corn on the property during a November 2012 site visit with Watermaster Rex Barrie.

The Transfer application proposes creating a 183-acre permissible place of use for water right 63-182 and the portion of 63-216A not changed to aesthetic and recreation storage as described above. These water rights will be used for residential lot and open-space irrigation of up to 148 acres within the proposed subdivision development.

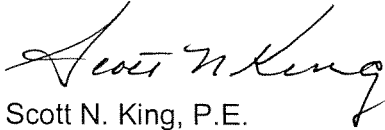

The Transfer application also proposes changing and addition diversion points by listing both *existing* points of diversion to both rights. Water right 63-216A currently lists the Mace-Mace ditch diversion at T4N R1E Section 16 Lot 5 (NWSW). Upon transfer approval, this diversion will be authorized for both transferred rights. Water right 63-182 lists a diversion at T4N R1E Section 21 SENE and described as the

Conway-Hamming ditch. However, per my site visit with Rex Barrie and confirmed by review of IDWR's Water Rights Accounting mapping, the Conway-Hamming ditch is located at T4N R1E Section 21 Lot 2 (NWNE). It appears water right 63-182 incorrectly lists a diversion at Section 21 SENE. Upon transfer approval, the actual Conway-Hamming ditch will be authorized for both transferred rights

Also enclosed is a check for \$1,110 for the application fees, based on \$370 for the permit application and \$740 for the transfer application.

Please contact me if you have any questions.

Sincerely,

Scott N. King, P.E.
Supervising Engineer
