Gary and Jeff:

I visited the JR Allen upper diversion yesterday (8-13-13) with Ron Shurtleff (WD65 Watermaster) and Tom Cimbalik (Valley Co. Sheriff's Office). There are pictures and video located at <P:\RWhitney\JR Allen Upper D>. The majority of the flow in Rock Creek was diverted toward the Allen Ditch (left side) upon our arrival. I estimate about 30 inches going to Allen (Little Rock Creek) and 10 inches down the main channel (right side). I asked the Watermaster to remove the diversion from Rock Creek and re-place it across the entrance to the Allen ditch. Upon leaving, the flow to the Allen ditch had ceased. After changing the diversion, the watermaster performed an open channel measurement with a flow meter in the main channel, below the diversion. The result of the measurement was .69 cfs. The diversion was "posted" prior to our departure and no other parties were present.

Thanks, RW
