It was a pleasure to visit with you, too. Being a retired federal worker, it is nice to see a public employee grab a task and be able to run with it like you are doing.

The colored dot is located incorrectly, which I am correcting. If you don't mind me folding the image into a legal-sized envelope, I will send you the information in today's mail from here in Boise, and will send you the nozzle information and photos as soon as I can. Thanks again for your call. Bill.

Mr. Galligan,

It was a pleasure to speak with you this morning. I have attached a jpg file to message that is the aerial photo I promised to send. Our database shows that you have the entire SESW as the place-of-use. We don't have a more precise location for your powerhouse and collecting that information was the motivation for my phone call.

Our database has the point-of-diversion (your spring) located where the magenta colored dot is. That may not be correct either. Please mark this photo with the correct location for your powerhouse and the spring source and send it back to me at the address below.

I understand that you have a Harris micro hydro turbine in place. Because they are somewhat standardized, if you can provide me the nozzle sizes that you use, I can determine the range of flow that you are probably putting to beneficial use.

I have not seen a combined solar and micro hydro powerhouse set up. If you have photos of your powerhouse, that you would be comfortable having in this water right file, and I would be very interested in seeing them.

Thank you very much.
