RE: Water Appropriation Permit 75-14311

Request for Information

Dear Permit Holder:

In 2007 the Idaho Department of Water Resources (IDWR) issued permit 74-14311 authorizing the development of a right to divert 0.09 cfs of water from North Fork Salmon River within the SW $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 36, Township 26 North, Range 21 East, B.M., for irrigation use.

The final step in the water appropriation process is the issuance of a Water Right License. By issuing a license, IDWR recognizes that water has been put to beneficial use in accordance with the permit. For your convenience, I am enclosing a copy of permit(s) listed above.

In an attempt to complete the licensing process, IDWR would like for you to provide the following information regarding your permit:

Point of Diversion Information:	Photographs of pumps at the point of diversion. Please indicate Points of Diversion on included map. If possible, GPS coordinates of pump locations – latitude/longitude.
Pump Information:	Make, Model, Serial Number, and Horse Power of Pumps as well as PSI or a photograph of the pump identification plate where all the required information is visible.
Pump intake and outflow information.	Size of intake and outtake.
Irrigation System Diagram	Please indicate on one of the maps provided how the water is moved into ditches and/or sprinkler lines in order to irrigate the area indicated by the permit. Please include sprinkler information such as size of water line, size, type, number of nozzles and gallon per minute of sprinklers if known.

Permit 74-14311 includes the following conditions:

4 Prior to diversion of water under this right, the right holder shall install a lockable device, subject to the approval of the Department, in a manner that will provide the Watermaster suitable control of the diversion.

#5 As part of the diversion works, the right holder shall install a straight length of conduit that will accommodate a device for measuring the entire follow of water being diverted in connection of this right. If the right holder uses a conduit, the straight length of conduit shall be at least ten times the diameter of the conduit and shall be above ground or otherwise easily accessible.

Photographs of:	A lockable device attached to the diversion that will provide the Watermaster control of the diversion. If your pump is electrical, a picture of the lock box is acceptable.
	A straight length of conduit or ditch suitable for installation of a device for measuring the entire follow of water being diverted.

The photographs submitted should be of sufficient number and at sufficient angles in order to confirm compliance with the condition listed on the permit.

In addition, I have enclosed a map of the identified Place of Use for permit 74-14311. Based on the information provided in the permit and the 2011 NAIP imagery, 3 acres of potential irrigation have been identified. If different acreage is being irrigated, please indicate where on the provided map(s). Please note that impermeable surfaces such as homes and driveways cannot be included in the irrigated acreage.

Please provide the requested information within the next thirty (30) days. IDWR will withhold further action on your permit for 30 days from the date of this letter in order to allow you time to respond. If IDWR does not receive a response from you within this time period, it will be assumed that you are not interested in pursuing a water right license, and action may be taken to void the permit. If you need additional time to respond, please contact me to discuss your options.

If you have any questions, please contact me at 208-287-4938. Thank you for your attention to this matter.

Respectfully,

A handwritten signature in cursive script, appearing to read "Danielle Favreau".
