Re: Beneficial use examination – permit 21-13048

This letter is to provide a status report on the additional flow measurements that were to be performed for the beneficial use examination of the above-referenced permit. Heavy snowpack in the Ashton area prevented significant work to replace the failed pumping equipment until June. The defective pump has now been replaced; however, there is an issue with the capacity of the variable-speed drive for this pump. The pump contractor is evaluating whether a larger-size unit is warranted, or whether some other aspect of the electrical system needs to be addressed.

As noted in the beneficial use exam, the pump capacity exceeds the permitted amount based on the performance curves, but a measurement is needed to provide confirmation. I will make the measurements as soon as the pumping system is verified to be operating properly. If there are any questions or concerns, please do not hesitate to contact me.

Cordially,

Charles G. Brockway, P.E.
