

## MEMORANDUM

TO: Water Right File – 63-11330

FROM: Daniel Nelson – Staff Hydrologist

DATE: June 25, 2013

SUBJECT: Review of Water Right File for Licensing

This water right was issued in 1990. The application for permit states that this water right was filed to supplement “Nampa-Meridian Water”. The field exam confirms that this permit was developed to provide supplemental water for the property. Therefore, supplemental conditions WB7, 104, and R65 need to be added to this water right for licensing. Condition 03A was replaced with R61. Condition 020 was updated with the modern version. Conditions 046, 26A, and 01G were removed.

The field exam provided a total acre amount of 126 acres. Due to rounding standards, registration and updated mapping techniques, the acre amounts have been altered slightly from the field exam map. The license will be issued for 126.3 acres. Please see attached map for changes and modifications to the original shape files.

This water right is totally overlapped by Nampa Meridian Irrigation District irrigation rights, US Department of Interior storage rights, and Boise Board of Control irrigation rights. The south ½ of the north east quarter of the section is also covered by New York Irrigation District water rights. The field exam states that owner uses Nampa Meridian Irrigation District water rights for this farm. The entire farm also falls within the City of Nampa service area. Domestic water right 63-47162 is in the NWNE of this section, but it doesn't affect this irrigation water right.
