

MEMORANDUM

TO: Water Right File – 63-11664

FROM: Daniel Nelson – Staff Hydrologist

DATE: June 24, 2013

SUBJECT: Review of Water Right File for Licensing

This water right was issued in 1992 through a program known as the M Well Permits or a Drought Relieve Permits. These permits were issued to respond to a severe drought situation and most of these permits are supplemental water rights. At the time this permit was issued, there were several conditions applied to the permit that shouldn't be carried forward to licensing. The following is my analysis of the conditions:

- Condition #1 – Was removed, because it is only needed for permitting.
- Condition #2 – Was removed, because it is only needed for permitting.
- Condition #3 – Is inactive and is supposed to be dropped at licensing.
- Condition #4 – This condition was dropped per Norm's direction on 12/98.
- Condition #5 – Was kept, but updated to use the current language.
- Condition #6 – Was Updated to the current condition R65.
- Condition #7 – Dropped, because a new well wasn't constructed.
- Condition #8 – Dropped, because conditions were met.
- Condition #9 – Was updated to current condition number 104.
- Condition #10 – This condition was originally condition 074, and is inactive, so it was dropped.
- Condition #11 – Was removed, because it is outside the new Basin 63 Restricted area.

No additional conditions were added. The conditions were just updated.

Other than the canal company water, the only overlapping water right was an application for permit 63-11835, which has been withdrawn. Therefore, the only irrigation overlap is Pioneer Irrigation District Water Rights. There are two domestic water rights for the Hueter Brothers Inc. and this area falls with the City of Caldwell service area, but these won't affect this irrigation right.
