G. NARRATIVE/REMARKS/COMMENTS

In 2004 the applicant filed for water right 47-17177(parent right), when the permit was originally filled it was intended to be a single well that supplied water for two homes on adjoining properties. However during the licensing process it was found that during development each property drilled its own well and water was supplied independently to each system. Subsequently the parent water right has been split into water rights 47-17584 and 47-17585. The owner for water right 47-17585 has filed a licensing amendment to move the location of the well to his property.

Right 47-17584 is used for domestic use and irrigation on the property. The irrigation on the property is estimated to be 2.25 acres. The owner recently transferred water rights 47-17591, 47-17592, and 47-17593 to allow for irrigation of 1.8 acres. The irrigation water rights for 1.8 acres and the 0.5 acres of irrigation allowed by this domestic right is sufficient to cover the irrigation use on the property. It is recommended that the right be approved with the appropriate domestic allowances.
