Re: Primary Source is Sun Valley Water and Sewer District

Today, I spoke with Pat McMahon/Sun Valley Water and Sewer District (208)622-7610. He stated that the domestic well for Rosenthal was a low producing well, and that the Sun Valley Water system stubbed into the Rosenthal domestic system, and is the primary source for the house for internal and external use, and pressurized irrigation system. Rosenthal's domestic well is still on-line, but there is a backflow device between the 2 systems to prevent a cross-connection. Rosenthal's domestic well is only a back-up system now. Pat was not sure when the Rosenthal's tied into the Sun Valley Water system, without checking their records. For this reason, licensing for the irrigation component will have supplemental conditions.
