

June 14, 2010

Shelley,

Mr. C. G. Brockway called Jeff today about 01-10542. Jeff found out that I had been assigned the file and we discussed the clarification needed. Jeff had promised that the IDWR personnel assigned to the field report review would return Mr. Brockway's call and I did.

I confirmed that Mr. Brockway and I are taking the same approach for calculating / measuring the flow. That approach is culvert equations. He knows I have a problem with his volume. He agreed with me that the volume he recommended (capacity x 365 days) was not realistic but that he hadn't worked up a different number.

The Snake River is high now and he would like to make an additional measurement or two to firm up his rating curve. I mentioned the power plant operations data and my contacts name. He said he had asked for operations information from Idaho Falls power and he said it was not available. However, he was not able to confirm that he had talked to my contact.

As you know, I am drafting a letter to provisionally accept the exam. As of this morning, Mr. Brockway knows that I have the assignment and he knows some of the problems the Dept has with his recommendations. I promised I would send him an early-bird copy of the letter via email so that he could take action this week to capture high water records. He would like to use my letter as justification for additional work charged to his client.

Michele
