Re: Field Report Narrative

An in house field exam was conducted. The correct fee was timely paid. The permit was issued for 3 acres of irrigation from a spring developed into a pond. Technical confirmation tools were ArcMap taxlot information and aerial photography from 1992 [no development], 2004, 2006, 2009 and 2011 [Bing].

The pond is clearly seen in the 2009 and 2011 Bing photography so there is no need to GPS the point of diversion.

The Spurlocks own 2 lots that total 3 acres. Based on the aerial review, less than 1 acre has been irrigated. It is clear from the aerals that lawn and landscaped areas were developed. I recommend licensing one acre of irrigation and 0.03 cfs.
