E. VOLUME CALCULATIONS

Stockwater volume = 35 cattle + 7 horses x 12 gpd/animal x 365 days / 325850 gal/acre-foot = 0.6 acre-feet

F. NARRATIVE/REMARKS/COMMENTS

Springs developed to provide two points of stockwater within a single common enclosure. Spring in the SWNESW was not flowing at the time of the field exam due to drought conditions. Spring in the NENESW was flowing. System is in serious disrepair, but evidence shows that springs were developed for stockwater purposes. Water user confirms that system provided water to 35 cattle and 7 horses at one time, consistent with the Proof of Beneficial Use statement.
