Re: Domestic development for one parcel

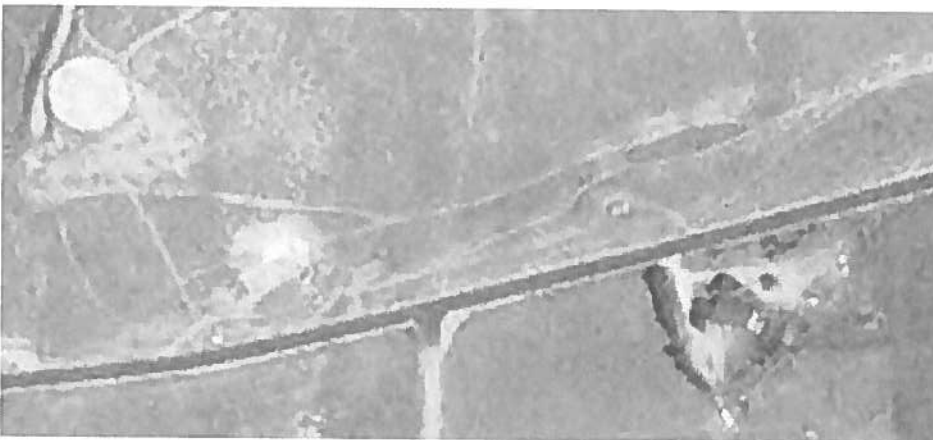

---

Proof was submitted on May 20, 1997. At that time, no homes were built on lots 1-5 as you can see on 1999 and 2003 aerial photography. But the well was completed on 7/14/1994 which is prior to the permit being issued.

Proof indicated that the well produces 15 gpm. If we consider the sub-in practice, I think we can recommend domestic use on Lot 5, which is the lot that contains the well. Since the well is on Lot 5, and they have power to run the well to be able to measure 15 gpm, assume the lot is stubbed in. Cannot make this assumption for lots 1-4.
