RE: Licensing Review Memo

Timeline:

Application Received: 12/22/1993*

Permit Issued: 4/22/1996

Proof of Beneficial Use: 4/29/1996

Field Examination: 6/4/1998

*the receipt for application fee was received on 12/30/93 yet the priority as 12/22, the receipt detail shows that it was an adjustment so I think that the fee was received on 12/22 but an adjustment was made 12/30

Point of Diversion: The PD consists of a collection pipe from a spring that goes into a storage tank. The point of diversion for this right is shared with 13-7028 and does not provide any additional rate, only volume.

POU: The place of use consists of 47 campsites and 15 homes. According to the field examiner all the lots are stubbed-in to the distribution system. Right 13-7028 covers 18 lots for a total of 80 lots. However, the field examiner reported that there are 85 lots total. Note that I requested DEQ's PWS that was conducted in 2010 and found that 80 metered connections existed on this system. The right holder may need to file for another 5 lots. That decision will be left to the right holder.

Volume and Diversion Rate: The volume for overlapping right 13-7028 was calculated at 0.6 af/lot. To be consistent, the 47 lots will get a volume of 0.6 af/lot or 37.2 af total. The diversion rate will be licensed for 0.20 cfs, as permitted, and have a combined limit with 13-7028.

Conditions: Condition of approval #5 has been met. Larry Beckstead who operates the system for Cub River Acres sent in photos of the system to confirm that a badger measuring devices are in place at the point of diversion and the point where water is discharged into Litz Creek.

Amendment?: Yes, the use needs to be changed from domestic to municipal. The use is being changed because of the inconsistency with the lots/block numbers. Plat maps that were submitted with the application and later with correspondence regarding 13-7028, contain lots numbers that do not match one another and are duplicative in some cases. I contacted the assessor's office and had them send me the most recent plat and it is the same as the others. Since the lots cannot be specifically called out on the license or a specific POU shape can be drawn, the use will be changed to municipal. Because irrigation is not allowed under this permit and most of the lots are transient campsites, a condition will be added to the lot to ensure that this right remains non-consumptive, as intended by the permit.
