Lorna,

Thank you for your response related to your new well. Based on your commitment to follow through with conditions of the drilling permit issued for the new well, I will recommend that our water right staff proceed with licensing of your permit. Since the location of the new well was changed (from NESE to SESE), please be aware that the other associated water rights, that were partially serviced from the old well must be updated (through an application for transfer) to authorize use from the new well. It is important to file the necessary applications soon to allow enough processing time and accomplish the required changes prior to the 2013 irrigation season. Technically, the new well can only serve acres associated with permit no. 57-11711 unless a transfer is approved. Additionally, in looking at the two pivots, there appears to be a place of use issue in the NESW and the NWSW of section 26. Your application for transfer(s) should include a "change place of use" component to include those acres. I have attached a map for your reference. Please include a copy of this map and email with your submittal so that the staff processing the applications are aware of these additional issues that need addressed.

Please let me know if I can answer any questions for you.

Regards,

ROB WHITNEY

Subject: well tag # 0063625

Rob,

In regards to our phone conversation regarding the new well (tag #0063625) and what our plans are for the old well. We plan to reduce the size of the well and use it for stock water. However, our tenants have corn planted around the area of the well and we won't be able to access the site until they harvest their corn crop. It will be sometime this winter before we will be able to do this. We will let you know just as soon as the work is completed. If you have any questions or concerns please don't hesitate to contact us.

Thank you for your time and consideration.
