Subject: Permit 37-8575A

Dear Mr. Stearns:

It was a pleasure to speak with you this morning. Thank you for confirming that you and your attorney have received the licensing amendment correspondence for the above permit.

As I promised in our phone conversation, this note is intended to briefly memorialize our discussion.

I understand that you have reviewed the elements of this water right as they appeared on the Application for Amendment and that you found the volume was unsatisfactorily low. The field examiner for water right permit 37-8575A did not recommend a volume. However, I am required by statute to determine a volume for the license. The volume which appears on the Application for Amendment is based on the limited data from 1995 and 1996 which was submitted with the field exam report. I recognized in my licensing review that that data might not be representative of a typical snow making season.

I would welcome data which will improve the quality of the volume number. You requested additional time to research and provide that data to me. I have agreed to allow until December 3, 2012 for that information submittal.

Respectfully,

Michele Edl
Associate Engineer
