Sandy,

I got the shape from Levi. It's a bit out of whack (doesn't fit well) with any of our data. I've got an email into Levi asking what control they use. I have adjusted it to the quads for now, though we could move it to register better with the taxlots or GCDB. Each of these is a bit different. It on my P: drive as Falls_Water shapefile. Grab all the files.

Michael

Sandy,

This is the only drawing I could get you that wasn't rejected by I suppose your system over there. Hope this works.
