RE: 2-7479 License Follow-up

Permit allowed domestic use for ½ acre lawn. It would be acceptable to license it that way. Likewise, it would be acceptable to clarify the use from domestic to irrigation without requiring an amendment. That would simply realign the actual use with a more accurate term based on the examiner's good judgment.

The examiner recommended irrigation of ½ acre, which can be licensed that way.

The examiner listed the POD as a 10-acre tract. Licensing to the 40-acre tract preserves future flexibility for the right holder and is preferred.

Examiner found about 0.05 cfs irrigating about 0.8 acre. Permit allowed less rate and acreage. The excess amount of use is minor and perhaps within or close to the margin of error, not worthy of enforcement follow up.

The license cover letter will note excess use and suggest a cutback to the licensed amount or a new application to cover the excess. Additional follow up is not warranted at this time.
