RE: Water right permit 65-13125

Dear Dennis

The POU clip to the right covers 2 acres which recognizes 1 acre each from both rights. When I conducted the field verification I found approximately 1 acre being irrigated. That included the lawn area, the west pasture, and the east pasture. Although the ditch bank, the area between the fields and below the main ditch were not being irrigated I am recognizing that that area was/is irrigated with your decreed right. Like the decreed right I did not identify a specific one acre parcel that that right would be limited to, rather the recommendation recognizes that between the two rights there are a total of 2 irrigated acres on the property. Basically I made an estimation for the place of use for the decreed right as as I previously indicated, I only found one irrigated acre.
