

Seefried Mitigation Plan for Kent Springs

The purpose of this document is to provide a mitigation plan that addresses the possible affects that pumping by William A. Seefried & Holly Seefried (Seefried's) of 4399 Houston Rd, Mackay, ID 83251, may have on Kent Springs. This document is in no way an admission by the Seefried's that their pumping has any affect on Kent Springs.

The Seefried's will install a plastic pipe, that will deliver water to the upstream side of the weir that is installed in Kent Springs just below the culvert that runs under Houston Rd. further described as the NWNW of Sec. 2, T06N, R24E, BM. This weir will be the only point at which the District #34 Watermaster (Watermaster) will determine the natural flow of Kent Springs & the amount, if any, of needed mitigation. When & if the natural flow of Kent Springs is determined by the Watermaster as being affected by the pumping of the Seefried's well, and the Kent Springs water right(s) are on & determined by the Watermaster to be deliverable, the Watermaster will inform the Seefried's & they will deliver water, in the amount determined by the Watermaster, to the upstream side of the weir installed in Kent Springs. Seefried's do not have to augment or increase the naturally occurring flow of Kent Springs, as determined by the Watermaster.

See attached map for location of pipeline, weir & point of delivery of mitigation water.
