Ref. Application for Permit 75-14735

Milton K. @ Gloria H. Eberhard

Dear Mr. Cefalo,

Some additional comments regarding our application to appropriate water in the Upper Salmon River Basin.

We wish to appropriate .01 cfs of water from Carmen Creek for the purpose of irrigating .5 acres of lawn, garden and landscaping on our property fronting on Carmen Creek.

The appropriated water would be diverted into a ditch that feeds an existing recreational permit pond 75-7607 and pumped from the pond to water the lawn.

We have a domestic well, A75-10826 but the flow is not adequate to irrigate the one- half acre lawn and landscaping.

Our point of diversion is downstream from the last irrigation decree on Carmen Creek. A plastic dam in the creek diverts almost all the water into that ditch. A slight amount leaks through the dam and that is what would be appropriated for irrigation.

It's my opinion our water appropriation would have no affect on ESA species since the creek is basically de-watered below the last diversion during later July through October 31.

Respectively,

Kirk @ Gloria Eberhard
