Re: Water Right No 47-02137 to be changed from SW1/4SW1/4SW1/4,
S23, T11S, R18E for .60 cfs now being advertised

I am also a Rock Creek water user and have experienced during this past year times when I have not had enough water to fill my water rights due to the shortage of water, the number of sprinklers that have gone in along the creek and water taken by later filings.

I would agree to these transfers or any other Rock Creek transfers only if the amount being diverted is checked to be sure that amount is available. I would also insist that he be held strictly to the amount of water he is licensed for if there is in fact that much water available.

It is difficult for me to understand how the amount he now pumps can be determined with his present pumping system which diverts the whole creek into a pump sump with pipelines connected together with other water systems.

Sincerely,

William J. Williams
