

MEMORANDUM

TO: Water Right files 65-23522 & 65-23523

FROM: Glen Gardiner 

DATE: September 7, 2012

SUBJECT: Condition requiring measuring device

Parent 65-13775 was split into 65-23522 (irrigation), 65-23523 (domestic) & 65-235249 (storage). These water rights cover the Gem Island Recreation Complex consisting of 34.4 acres of grass, baseball fields and picnic areas. The parent permit conditions required for irrigation purposes, the right holder shall install and maintain a measuring device and lockable controlling works. The locking controlling works are installed.

In discussions with Shelley Keen, Craig Saxton and Dan Nelson, it was determined that installing a measuring device would require redesigning the sprinkler system to allow for variable flows. In the event of curtailment, it is believed the system would be turned off completely therefore the need to allow for variable flow rate control is not practical and a measuring device will not be required.
