11. Application Explanation

Applicants propose developing ground water to supply a proposed 0.8-acre pond that will be used for aesthetic and irrigation storage at the Meridian Temple and adjacent meetinghouse sites. Water from the pond will be pumped into a pressurized system for irrigation within the church campus. The ground water will supplement surface water (from Settlers Irrigation District and waste water under right 63-4935) that will flow through the pond, but not be stored. The pond's initial fill will be supplied from ground water. Total pond volume is approximately 10.0 acre-feet. The attached ET Idaho data indicates total evaporation during precipitation deficit months equates to 1.8 acre-feet (rounded up to 2.0 acre-feet). Seepage is not a factor since the pond will be membrane lined.

Water bearing zone to be appropriated is from 200 to 300 feet.

Expected annual pond evaporation during precipitation deficit months =
0.8 acre pond surface area X 1.8 ft/yr net pond evaporation =
1.4 af annual pond evap consumptive requirement
